

We have switched access to eResources of the library to EZProxy.

Access from outside the university network to the eResources is only available to university members.

EZProxy is a convenient alternative to VPN to allow authorized persons to access the library's online resources from home.

No installation of additional software is required. EZProxy works independently of the browser and operating system used.

Please use your university account for login.

Use only the links to eResources listed on the library's web pages for research.

If you have bookmarks set for specific eResources, they can be modified by placing “<https://ezproxy.hof-university.de/login?url=> “ in front of the original URL.

The correct link will then look like this, for example:

<https://ezproxy.hof-university.de/login?url=https://link.springer.com/>
